## Roof Lift

More headroom and better ventilation

Attached to wall framing and flashed with standard roof jacks, SkyLift Roof Risers keep a patio roof well above the adjoining roof of the house for better air circulation, more headroom, and more natural light.

Installing the steel brackets requires cutting a hole in the roof sheathing so they can be attached directly to the top plate of the exterior wall. A standard roof jack then seals the opening, just like flashing around a plumbing stack.

Unlike a patio or deck roof that's anchored to the house roof or exterior wall, an elevated roof can carry a generous pitch without reducing headroom at the far edge of the patio. The space between the house roof and patio roof also encourages air circulation and releases heat that would otherwise be trapped.

The brackets are available in lengths from 18 to 36 inches. Cost ranges from about \$140 to \$200.

An advertisement for Highpoint Deck Lighting. The top features a mountain range graphic and the company name "HIGHPOINT" in large, bold, red letters, with "DECK LIGHTING" in smaller letters below. A circular badge on the right says "LIFETIME FINISH WARRANTY!". The left side shows a wooden deck with various lighting fixtures: a tall post with a lantern, a post with a down-light, a post with a recessed light, and a post with a round light. A small inset shows a close-up of a light fixture with the text "Quality in Every Light!". The right side contains text about the "NEW Endurance Deck Lighting Lines..." and "The Possibilities Are Endless!". It highlights "exceptional service and outstanding long-term savings" due to quality manufacturing and energy efficiency. A call to action at the bottom left says "CALL... for Options &amp; Pricing!" and provides the phone number "888.582.5850" and website "WWW.HPDLIGHTING.COM".

### Treated Glulams

Douglas fir beams and columns for exterior use

Rosboro's preservative-treated glulam beams and columns are designed for locations where they will be in full view.

Treated X-Beams are protected by a clear wood preservative that gives the Douglas fir a honey-colored hue and protects the wood against decay, mold, bacteria, and insects, including the Formosan termite, according to the Springfield, Ore., company.

Columns are treated with copper naphthenate, which gives them ground-contact protection.

Beams are available in widths of 3 1/2 inches and 5 1/2 inches and in depths ranging from 9 1/2 inches to 18 inches. Columns come in widths of 3 3/8 inches, 5 1/4 inches, and 7 inches, and depths of 3 1/2 inches, 5 1/2 inches, and 7 inches.

X-Beams carry a 25-year warranty.

### Water Diversion

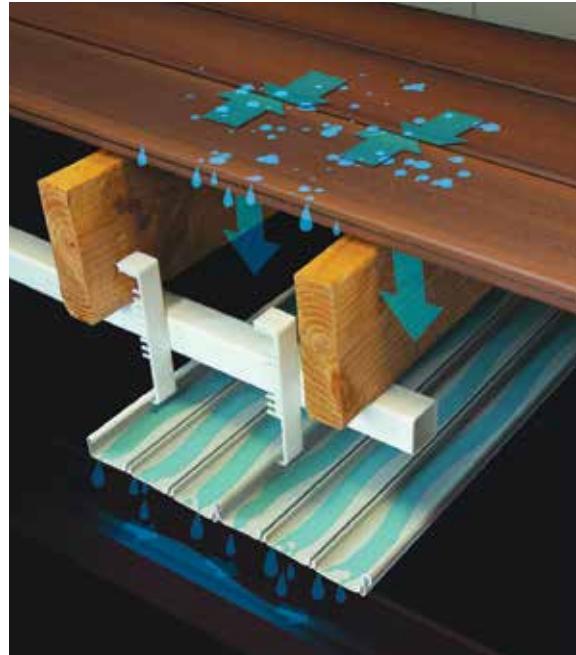

Under-deck drainage panels

CertainTeed's UnderShield water-diversion system is designed to keep below-deck spaces dry. Vinyl panels measuring 16 feet long by 6 inches wide attach to a concealed grid that's attached in turn to the deck framing. The panels, which divert water to the edge of the deck, are available in chamfer or beaded styles and in three colors: white, gray, and wicker.

Stainless steel hardware is included. Full installation instructions, as well as instructions for installing a light fixture or fan in a panel-covered ceiling, are available at CertainTeed's website.

UnderShield is covered by a limited lifetime warranty and sells for between \$6 and \$7 per square foot.

## BUILDER EXPECTATION EXCEEDED!

### SplitStop® HIGH-PERFORMANCE DECK SCREWS

Square & Star Drive Screws

Patented Design  
Virtually Eliminates  
Wood Splitting

Star drive  
without pre-drill  
or pilot prep.  
Please see website.

Call 800-472-6273 or visit our website: [SplitStop.com](http://SplitStop.com) for more information & free samples.

### Corrosion Resistance

High performance, lower cost

USP Structural Connectors has launched a new line of connectors and fasteners designed for corrosive environments.

The company's Gold Coat products have two anti-corrosive layers: a standard zinc coating over the steel substrate followed by a second layer described by the company as a "non-reactive, organic polymer." In combination, the two layers provide corrosion resistance that the company says rivals that of stainless steel, but for a lower cost.

Accelerated weather testing done at Michigan State University found that the Gold Coat coating lasted two or three times as long as standard galvanized coatings, according to USP.

The coating is applied to a variety of fasteners and connectors, including angle clips, joist hangers, post anchors, rafter ties, wood screws, and nails. A complete list is available at the company's website.

## Joist Jaw

A Builder's Extra Hands

Brooker's Joist Jaw™ is the perfect accessory for the professional wood framer. Like a second pair of hands, the Joist Jaw™ holds up the rafters and joists, eliminating the need for two people.

"The Joist Jaw makes building deck additions much easier. It saves time by having an additional helper to position and hold the joists in place." —Philip

- Save time and money
- Second pair of hands
- Solid steel construction
- Decking, roofing and flooring applications
